

## Problem Set #1

### Objective

The first problem set is meant to revise things you are expected to have seen before: **running a regression, interpretation of linear regression results** and **hypotheses testing**.

### Exercises

You are expected to prepare exercises 3.2, 3.4, 4.2 and 4.4 from the Wooldridge introductory textbook for the first part of the class. For the second part of the class you have to use Stata (available on any computer in the library) and work through exercises C3.2, C3.4, C4.2 and C4.6.

### Hand-In Time & Place

As in all our classes, you/will have to hand in the first problem set before class. Please leave it in my pigeon hole (Konrad Burchardi) in S600 before 12:00 on Wednesday.
